■ *CIA 2002* ■  
*Madrid, 20/9/2002*

## Outline

- Motivations
- A policy-based Approach to Mobility
- A policy-controlled Mobile Agent Framework
- Conclusions and Open Issues

■ *CIA 2002* ■  
*Madrid, 20/9/2002*

# Motivations

Mobility adds complexity to the design and development of applications

- Programmers have to explicitly deal with the allocation of agents
- **Mobility specifications embedded into the agent code** are not adequate to cope with the frequent changes of the environment state

➔ need of flexibility

**Question...** **HOW** to allow dynamic changes in the mobility behaviour of agents without reengineering the agent code?

**...Solution**  *Separation of concerns: mobility and application logic*

CIA 2002  
Madrid, 20/9/2002

# Policy-based Approach to Mobility

*“Policies are rules governing choices in the behavior of a system, and are separated from the components in charge of their interpretation”*

**IDEA** ➔ **Policies for governing changes in the mobility behaviour of Mobile Agents**

**Mobility policies specify:  
when, where and which unit of mobility must migrate**

**Advantages of policy-controlled mobility:**

- Possibility to facilitate dynamic reconfiguration of mobility strategies
- Possibility to specify mobility behaviour at a higher level of abstraction

CIA 2002  
Madrid, 20/9/2002

# Design Requirements

- Policy language
  - declarative
  - expressive
  - platform-independent
  
- Facilities for policy lifecycle management
  - *Specification Service*
  - *Distribution Service*
  - *Enforcement Service*
  - .....

CIA 2002  
Madrid, 20/9/2002

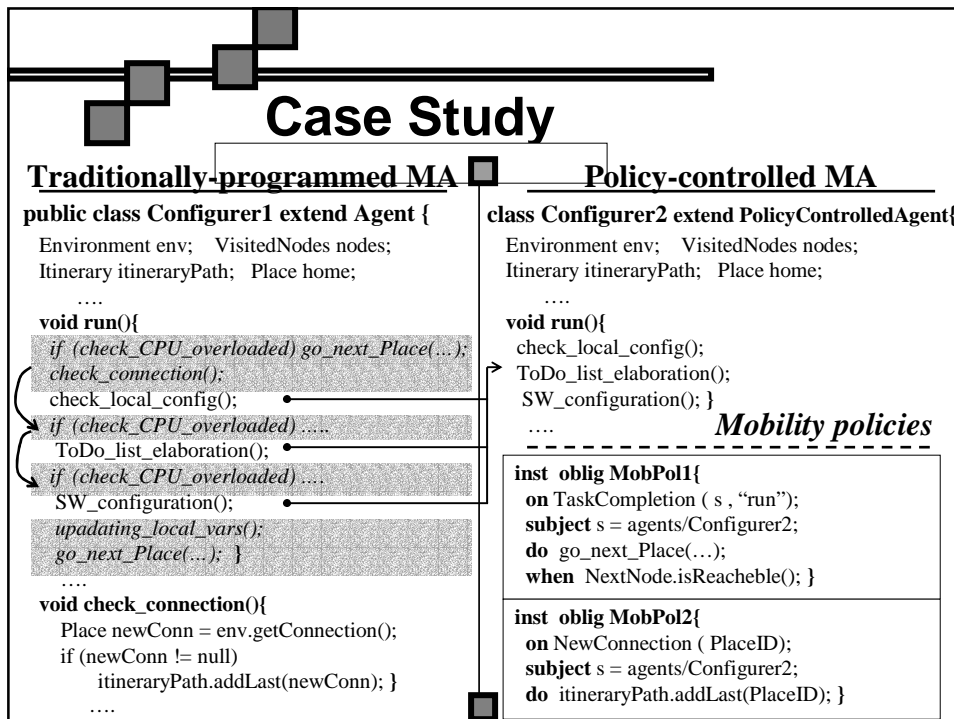

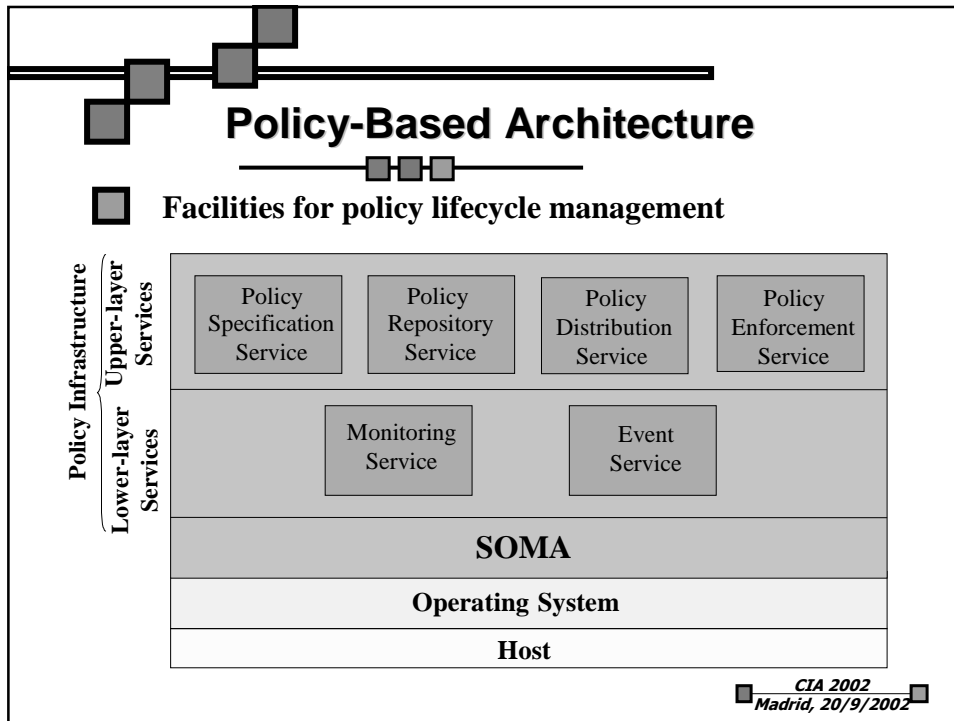

# Mobility Policies

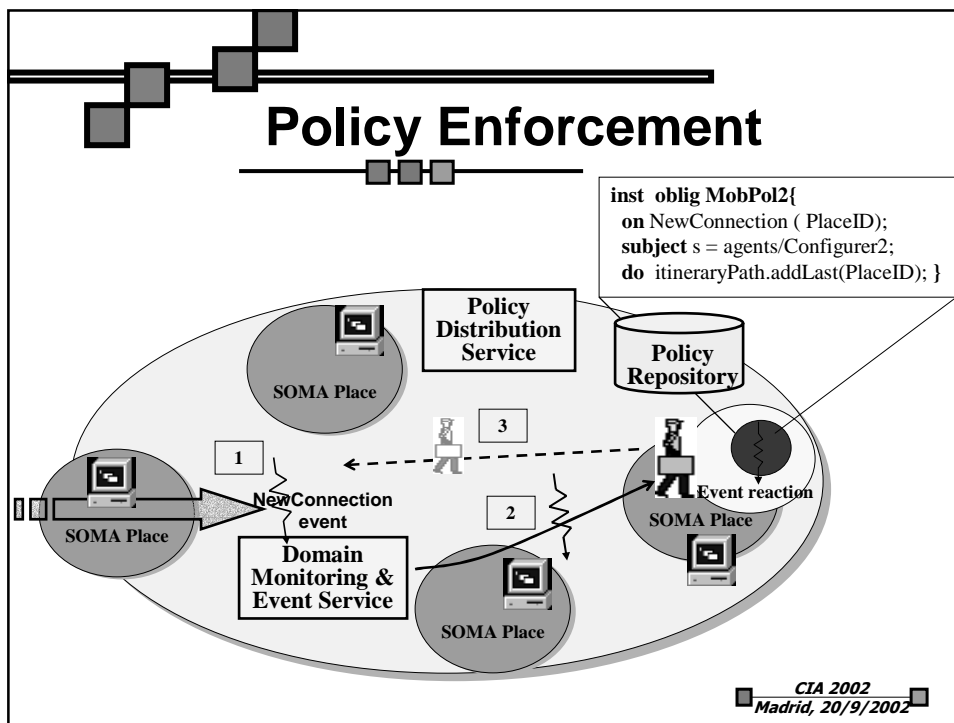

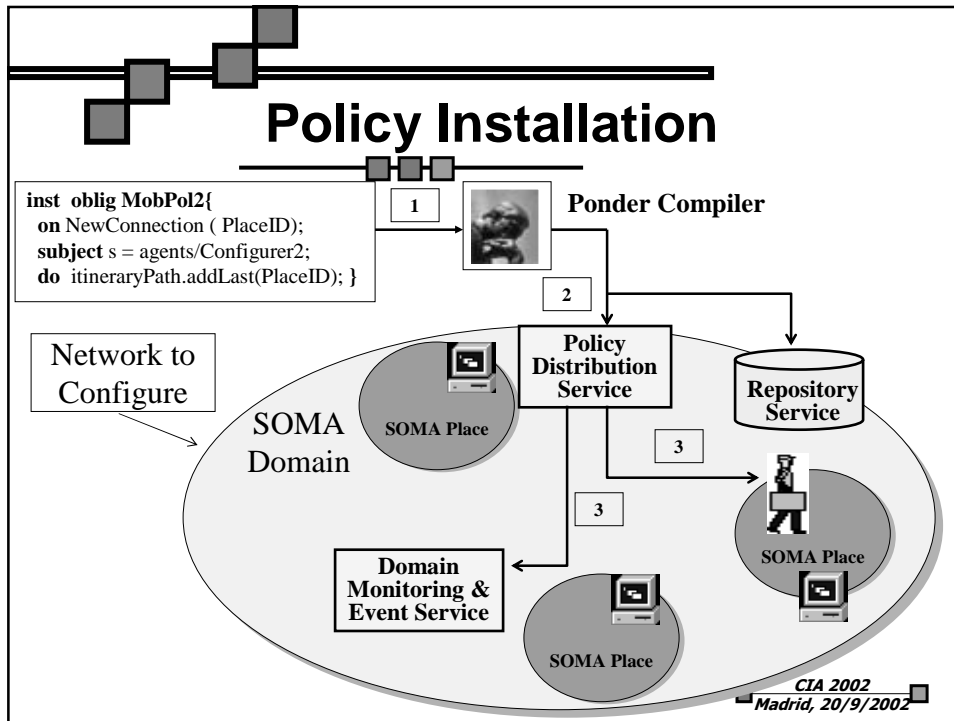

- Policy language
    - ☞ Event-triggered declarative policies for controlled mobility
- ↓
- Obligation Ponder Policies**

## Examples

<pre>inst oblig MobPol1 {   on CPU(load, 90);   subject s = agents/Buyer;   do s.go_next_Place(G1, "run");   when   MonitoringSystem.isReachable(G1); }</pre>	<pre>inst oblig MobPol2 {   on CPU(load, 90);   subject s = System/Relocator;   target t = agents/Buyer;   do s.go_next_Place(G1, "run");   when   MonitoringSystem.isReachable(G1); }</pre>
---	--

CIA 2002  
Madrid, 20/9/2002

## Conclusions

- ✓ Policy-based approach to control mobility can simplify mobile application design and maintenance
- ✓ Dynamic adaptation of agent mobility behaviour via changes in policy specifications

## Open Issues

- ? Policy-based approach to rule and control other aspects of mobile applications (security, fault tolerance, communication...)
- ? Policy-based approach to rule and control mobility behaviour of complex systems

CIA 2002  
Madrid, 20/9/2002
